SUMMARY

Electrical and Computer Engineering graduate with hands-on experience developing software components, automating workflows, and optimizing storage applications. Scaled system throughput by implementing C++, Python, Java, and JavaScript logic adhering to object-oriented programming principles in Linux environments. Improved software reliability by troubleshooting applications, conducting root cause analysis, and configuring CI/CD pipelines with Jenkins, JSON, and XML.

EDUCATION

Texas Southern University, Houston, TX

August 2020 - May 2026

Electrical Engineering and Computer Engineering (ECE) | Bachelor of Science

GPA: 3.03

Relevant Coursework: Data Structures, Relational Databases, Statistics, Software Engineering, Distributed Systems, Cloud Data Architectures, Machine Learning Models, Exploratory Data Analysis.

TECHNICAL SKILLS

Programming Languages: Python, C++, C#, Java, JavaScript, Scripting, SQL.

Software Development & Testing: Debugging Software, Software Testing, OOP, CI/CD, Jenkins, JSON, XML, REST APIs, Git.

Environments & Tools: Linux, Windows, VS Code, Databricks, JIRA, Agile Development, Agile Software Development.

Systems & Storage: Data Center Storage Systems, Relational Databases, AWS, Embedded Systems.

Core Competencies: Root Cause Analysis, Troubleshoot, Strong Problem-Solving Skills, Attention to Detail, Verbal and Written Communication Skills, Willingness to Learn.

WORK EXPERIENCE

Harris County Flood Control District (*Data & Infrastructure Analytics*)

Houston, TX

Data Scientist Intern

June 2025 – August 2025

- Reduced data pipeline execution latency by 20% by debugging software workflows and optimizing SQL query logic across relational databases.
- Increased predictive model accuracy by 15% by applying root cause analysis on high-volume datasets to eliminate data anomalies.
- Cut decision-making time by 30% by engineering interactive web dashboards in Tableau and Power BI for enterprise reporting.
- Improved system uptime across 5 business units by troubleshooting application issues and automating JSON and XML data validation scripts in Python.
- Accelerated project completion rates by practicing Agile development, leading sprint standups, and applying strong problem-solving skills to technical roadblocks.

PROJECTS

Microplastics Spatial Tracker — *Data Science & Distributed Computing*

- Scaled system processing capacity to over 22,000 environmental records by building execution modules with Python and scripting languages.
- Improved frontend rendering speed by 25% by engineering an interactive geospatial application using JavaScript, REST APIs, and AWS.
- Prevented downstream application bugs by implementing automated software testing routines to validate incoming JSON and XML payloads.

Applied Machine Learning Initiatives & Defect Detection — *Software Engineering & R&D*

- Reduced manual code verification effort by 40% by deploying automated inspection scripts within a Linux development environment.
- Streamlined build and release cycles by configuring continuous integration pipelines using Jenkins and Git version control.
- Enhanced code reusability by authoring modular software components in C++ and C# while exercising verbal and written communication skills in an Agile team.
